According to this study, the global Civil Aircraft Fire Protection Systems market size will reach US\$ 1404 million by 2031.

Aircraft fire protection system is installed to protect and track any symptoms which may cause fire inside the aircraft. Fire protection system in aircraft consists of fire detection system and a fire extinguishing system. Aircraft fire protection system has now been improved and do not rely on crew member's observations to detect fire. For fire detection, advance detection systems such as thermal switch systems, thermocouple systems, and continuous-loop systems are used in aircraft fire protection systems. High rate of discharge (HRD) system is used for fire extinguisher in modern aircrafts. In any event of fire, fire protection systems in modern aircrafts are capable of alerting onboard crew members and take curative actions such as fire extinguishing.

According to the IATA, the total volume of air passenger traffic in 2022 increased by 64.4% compared to 2021. Global passenger traffic for the whole year was 68.5% of pre-pandemic (2019) levels. Total global aviation revenue grew by 43.6% to \$727 billion in 2022. In 2022, global airlines were expected to have a net loss of \$6.9 billion, significantly better than the net loss of \$42 billion in 2021 and \$137.7 billion in 2020. According to data from the Civil Aviation Administration of China, in 2022, the cumulative operating income of the entire industry was 632.89 billion yuan, down 15.8% from the previous year. The loss was 217.44 billion yuan. Among them, airlines achieved operating income of 336.48 billion yuan, and the loss was 177.12 billion yuan. The airport achieved operating income of 77.01 billion yuan and the loss was 47.62 billion yuan.
