A civilian drone or unmanned aerial vehicle is an airplane that can be flown using a remote. It is controlled either by a ground-based pilot using a remote control device or flies autonomously using onboard computers. Civilian drones are used in numerous applications such as wildlife conservation, environment monitoring, search and rescue operations, inspection of oil and gas pipelines, aerial photography, filming, geological surveys, crop monitoring, law enforcement, and border patrol. They are cost-effective compared to manned aircraft. Also, they do not risk human lives as they do not require onboard pilots.

Drones can offer various advantages, not only in terms of potential economic savings but also environmental benefits less fuel consumption, fewer CO2 emissions, and reduced noise. The increased use of drones for civilian applications has presented many countries with regulatory challenges.
