## Abstracts

The global Civilian Helicopter market size is predicted to grow from US\$ 8116 million in 2025 to US\$ 12150 million in 2031; it is expected to grow at a CAGR of 7.0% from 2025 to 2031.

The impact of the latest U.S. tariff measures and the corresponding policy responses from countries worldwide on market competitiveness, regional economic performance, and supply chain configurations will be comprehensively evaluated in this report.

Civilian helicopters are aircraft that use rotors to provide lift and propulsion, and are capable of vertical takeoff and landing, hovering, and low-speed flight. Unlike military helicopters, civil helicopters focus on safety, economy, and versatility, and are widely used in various fields, mainly serving commercial, public affairs, and personal needs, including transportation, rescue, firefighting, agriculture, sightseeing, etc.

The global civil helicopter market continues to grow, driven mainly by emergency rescue, offshore energy operations and high-end tourism, while electrification and autonomous driving technologies bring new opportunities. However, high operating costs, strict regulations, competition from electric vertical take-off and landing vehicles (eVTOL) and pilot shortages remain major challenges facing the industry. In the future, market growth will rely on technological innovation and policy support, especially in urban air mobility and emerging markets.
