The global Clamp Filter market size is predicted to grow from US$ 749 million in 2025 to US$ 1495 million in 2032; it is expected to grow at a CAGR of 10.6% from 2026 to 2032.

A clamp filter consists of a ferrite core that is divided into two parts, contained in a plastic case that has elasticity and durability. Eliminate audible interference caused by high frequency radio waves (RFI) by using this ferrite radio frequency noise reducer.

With the continuous growth in demand for wireless connectivity terminals such as smartphones, unlimited communication is being used more and more frequently, driving significant growth in the size of the RF market. 5G networks deal with an increase in frequency bands, the RF front-end is becoming more and more complex, and the use of modular RF design can better deal with interference, significantly reduce the PCB area of the RF module, shorten the terminal RF design cycle, and gain more and more terminal manufacturers. Recognized by more and more terminal manufacturers. Broadcom, Skyworks, Qorvo, Murata, Qualcomm and other five RF giants basically monopolize the middle and high-end RF market. Qualcomm through the 'baseband + RF' one-stop service strategy, in the early stage of 5G to take the lead. 5G need to deal with higher frequency RF signals, high-frequency filter design has become a key ability, Broadcom Fbar high-frequency filter capabilities leading, in-depth binding Apple, Samsung customers. Murata benefited from the trade friction between China and the U.S., and introduced more new products in Huawei. Skyworks/Qorvo's dominant position in the base station end is solid, while the cell phone market share is squeezed by competitors.
