The clamp harmonic power meter is an instrument used to measure the harmonic power in the power system. It measures the current and voltage signals through the current clamp and voltage clamp respectively, and then calculates the harmonic power. The working principle of the clamp harmonic power meter is based on Feynman's theorem, that is, the average value of the product of current and voltage is equal to the average value of power. By sampling the current and voltage signals and performing corresponding mathematical operations, the accurate value of the harmonic power can be obtained. Clamp-on harmonic power meters usually have the characteristics of high precision and wide measurement range, and can be used to measure harmonic power

in different frequency ranges. It has important application value in harmonic analysis and harmonic control of power system, and can help users understand harmonic problems in power system, and take corresponding measures to optimize and improve.
