Clip-on tire balance weights are a special type of tire balance weights, which are mainly used to adjust the mass distribution of the wheel to achieve dynamic balance of the wheel under high-speed rotation. The clip-on tire balance weight can be firmly fixed to a specific position of the wheel through its unique clip-on design. When the wheel rotates at high speed, vibration and imbalance will occur due to the uneven mass distribution. The clip-on balance weight offsets this imbalance by adding or reducing the weight at a specific position, so that the wheel can reach a dynamic balance state. Clip-on tire balance weights are widely used on the wheels of various vehicles, including cars, trucks, motorcycles, etc. It is particularly suitable for vehicles that need to frequently replace tires or perform wheel repairs, because the clip-on balance weight can be easily installed and removed without destroying the original structure of the wheel.
