The global Clamp-type Thermal Mass Flowmeter market size is projected to grow from US\$ million in 2022 to US\$ million in 2029; it is expected to grow at a CAGR of % from 2023 to 2029.

Clamp-type thermal mass flow meters usually consist of a sensor and a control unit. They have the characteristics of high accuracy, wide measurement range, fast response, no need for pressure correction, no moving parts, and wide application. When using a clamp-on thermal mass flowmeter, proper installation, calibration and maintenance should be carried out according to the specific application requirements to ensure the accuracy and reliability of the measurement results.

A clamp-type thermal mass flowmeter is an instrument used to measure fluid mass flow. It is based on the principle of heat conduction and determines the mass flow rate of the fluid by measuring the cooling effect of the fluid on the sensor heating element.
