The global Class G Audio Amplifier market size is predicted to grow from US$ million in 2025 to US$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

A class G audio amplifier is a type of power amplifier commonly used in audio amplifiers. It is an improved class AB amplifier with multi-stage power supply design to improve efficiency, reduce power consumption and heat loss. In a class G audio amplifier, the input signal is sent to the output stage circuit after passing through the pre-amplification circuit. The output stage circuit is usually composed of multiple power amplifiers cascaded. Each power amplifier has a different power supply voltage. The switching of the power supply voltage can be adjusted according to the amplitude of the signal to improve the efficiency of the power amplifier. When the amplitude of the output signal is small, the class G amplifier will use a low-voltage power supply to work, thereby reducing power consumption and heat loss. When the amplitude of the output signal is large, the class G amplifier will automatically switch to a high-voltage power supply to provide sufficient power. Class G audio amplifiers have the advantages of high efficiency, low heat loss, and low distortion, so they are widely used in audio amplifiers, power amplifiers, car audio and other fields.

United States market for Class G Audio Amplifier is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for Class G Audio Amplifier is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.

Europe market for Class G Audio Amplifier is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
