Class H non-encapsulated dry-type transformer is a dry-type transformer with an insulation class of Class H. It is usually used in power systems in high-temperature environments or high-load conditions. Class H refers to the temperature rating of the transformer insulation material, and the maximum temperature it can withstand is usually 180°C. Non-encapsulated dry-type transformers mean that their windings and core parts are not encapsulated by oil or other liquids. Compared with oil-immersed transformers, they have better environmental protection and safety.
