Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

Class N autoclaves are compact and they are for sterilizing simple materials. The letter “N” stands for “naked solid products”. Therefore, these autoclaves cannot be used to sterilize textiles, porous loads, hollow items or even products in pouches, as the cycles do not have the right characteristics to pass specific physical tests. Another potential weakness of these machines is that the required steam penetration cannot be guaranteed. Among other things, it is dependent on the creation of a vacuum at the start, which is not obligatory in these machines.
