The global Classic Total Station market size is predicted to grow from US$ 147 million in 2025 to US$ 204 million in 2032; it is expected to grow at a CAGR of 4.9% from 2026 to 2032.

The classic total station is also called the conventional total station. It has basic functions such as electronic angle measurement, electronic distance measurement, and automatic data recording, and some of them can also run airborne measurement programs independently developed by manufacturers or users.

The classic total station market refers to the market for traditional total stations that were widely used in surveying and mapping applications before the advent of advanced digital technologies. These classic total stations were equipped with optical and mechanical components to measure distances, angles, and coordinates.

However, with the advancement of technology, the classic total station market has seen a transition to digital total stations. Digital total stations incorporate electronic distance measurement (EDM) systems, internal data storage, and digital displays, offering enhanced functionality and efficiency.

While the classic total station market has diminished in recent years, these instruments still hold relevance in certain applications and regions where digital technologies may not be readily accessible or cost-effective.

In summary, the classic total station market represents the market for traditional total stations that relied on optical and mechanical components for measurement. These instruments played a significant role in surveying and mapping projects before the widespread adoption of digital total stations. While the market has transitioned to digital technology, classic total stations continue to have their place in specific applications and
