The global Classical Swine Fever Vaccines market size is predicted to grow from US\$ 171 million in 2025 to US\$ 226 million in 2031; it is expected to grow at a CAGR of 4.8% from 2025 to 2031.

The impact of the latest U.S. tariff measures and the corresponding policy responses from countries worldwide on market competitiveness, regional economic performance, and supply chain configurations will be comprehensively evaluated in this report.

It is a type of vaccine for classical swine fever. Classical swine fever (CSF), also known as hog cholera, is a contagious viral disease of pigs, including wild boar. The causative virus is a member of the genus Pestivirus of the family Flaviviridae, and is closely related to the viruses of bovine viral diarrhoea and border disease. There is only one serotype of CSF virus (CSFV).

The Classical Swine Fever (CSF) Vaccines market is driven by the urgent need to control and prevent outbreaks of CSF, a highly contagious viral disease that poses a major threat to the global swine industry. Governments and veterinary health organizations are implementing strict disease management and vaccination programs to safeguard animal health and ensure food security. Increased awareness among pig farmers, coupled with rising pork consumption worldwide, is accelerating the adoption of effective CSF vaccines. Furthermore, technological advancements in vaccine development, including the emergence of safer and more effective live attenuated and subunit vaccines, are supporting market growth.

Despite growing demand, the CSF Vaccines market faces several challenges, including inconsistent vaccination coverage and limited access to vaccines in low-resource

regions. Inadequate cold chain infrastructure and weak veterinary healthcare systems in developing countries can hinder effective vaccine distribution and disease control. Additionally, the emergence of new CSF virus strains and the potential for incomplete immunity with certain vaccines pose ongoing risks. Regulatory hurdles and the need for continuous monitoring and updating of vaccine strains add further complexity. Addressing these issues requires coordinated international efforts, improved vaccine accessibility, and enhanced surveillance and biosecurity measures.

The global classical swine fever vaccine market is dominated by Winsun, Boehringer Ingelheim and CAHIC, with the top three manufacturers accounting for about 37% of the market share. Asia Pacific is the largest market for classical swine fever vaccines, with a market share of about 70%, followed by Europe with a market share of about 15%. Tissue Culture Origin is the main type, with a share about 66%. Market Sales is the main application, which holds a share about 95%.
