## Abstracts

According to this study, the global Cleanroom Disposables market size will reach US\$ million by 2031.

A cleanroom is a controlled environment in which the number of dust particles per cubic meter is controlled and regulated. In addition, the temperature, air pressure, humidity, airflow patterns and motion, static charges, and lighting are also controlled. Cleanroom apparels are worn by people to control contamination in cleanrooms. These cleanroom apparels are disposable as well as reusable in nature.

According to the report, one driver in the market is growth in aerospace and defense sector in developing economies. Cleanrooms are used for manufacturing aerospace components. Cleanroom processing is of paramount importance in the aerospace industry for delivering safe, uncontaminated, and effective components. Slightest contamination in controlled environments can cause manufacturing defects. These defects cause range from severe hazardous defects leading to equipment failure, to minor defects such as imperfect painting. Therefore, disposables are used in cleanroom environments to prevent such contaminations.
