A fan filter unit (FFU) is a type of air filtering equipment. It is used to supply purified air to cleanrooms or microenvironments by filtering out harmful airborne particles from the recirculating air. The units are installed within the system’s ceiling or floor grid. Large cleanrooms require a proportionally large number of FFUs, which in some cases may range from several hundred to several thousand. Cleanroom Air Filters are designed for use in controlled critical environments such as hospitals and in microelectronic, pharmaceutical and biotech facilities. A cleanroom uses air filters that are much more efficient than those used in offices.
