The global CLG (Caprylyl Glycol) for Cosmetics and Personal Care market size is predicted to grow from US\$ 31.30 million in 2025 to US\$ 45.13 million in 2032; it is expected to grow at a CAGR of 5.2% from 2026 to 2032.

Caprylyl glycol (CLG) for cosmetics and personal care is a diol compound (1,2-octanediol) derived from caprylic acid (usually derived from coconut or palm oil). In cosmetic formulations, it is primarily used as a moisturizer, emollient, preservative synergist, and antibacterial agent. It possesses good skin compatibility, broad-spectrum antibacterial properties, and multifunctional synergistic effects, enabling it to improve product stability and safety while reducing the amount of traditional preservatives used. Therefore, it is widely used in skincare, personal care, and makeup formulations. Global sales of caprylyl glycol for cosmetics and personal care products are projected to reach 3,030 tons in 2025. Due to its high purity and regulatory requirements, its average price is approximately US\$10,653 per ton. The industry's overall gross profit margin is between 25% and 40%, exhibiting the high added value characteristics typical of fine chemicals. Profitability is primarily influenced by raw material costs (fatty acids), production processes, and customer structure. The caprylyl glycol industry chain for cosmetics and personal care products consists of three parts: upstream natural oils and fatty acid raw materials, midstream fine chemical manufacturing, and downstream cosmetic applications. Upstream mainly involves natural oil processing companies such as those processing coconut oil and palm oil, which separate and extract caprylic acid, followed by further basic chemical treatments such as hydrogenation and oxidation. The midstream is the core manufacturing stage, where manufacturers produce high-purity caprylyl glycol through catalytic synthesis, hydrogenation reactions, and multi-stage distillation purification processes. Cosmetic-grade products must comply with stringent regulatory systems (such as FDA and REACH) and certification standards (such as ISO

and COSMOS), resulting in high technological barriers. Midstream companies are typically global leaders in fine chemicals or suppliers of functional raw materials. Downstream applications primarily target skincare, personal care, and cosmetics, with products entering the consumer market through brand owners and OEM/ODM factories. In recent years, with the rise of trends such as 'preservative-free,' 'naturally sourced,' and 'green formulations,' downstream demand for high-quality caprylyl glycol has continued to increase, simultaneously driving upstream companies to shift towards sustainable raw materials.
