The climate control panel is a user interface that allows individuals to control the heating, ventilation and air conditioning (HVAC) systems in vehicles or buildings. The climate control panel provides access to various settings that can be adjusted to create a comfortable indoor environment, such as temperature, fan speed and air distribution. In vehicles, the climate control panel is usually located on the instrument panel or center console, and can include buttons, knobs and digital displays to allow the driver and passengers to adjust HVAC settings. The panel can also have functions such as

automatic temperature control, which uses sensors to maintain the set temperature in the vehicle. In buildings, the climate control panel is usually part of a large HVAC system to control the temperature and airflow of each room or area. The panel can be wall mounted and can include a thermostat to monitor and adjust the temperature. The climate control panel of some buildings can also be controlled remotely using smart phones or other mobile devices.
