Clincher bike tires are the most common type of tires used in bicycles, including road bikes, gravel bikes, and commuter bikes. They are called “clincher” because they rely on an interlocking system to secure the tire to the rim.

Clincher tires consist of three main components: the tire casing, the bead, and the inner tube. The tire casing is made of rubber and provides the outer surface that comes into contact with the road. The bead is a bundle of steel wires or Kevlar strands embedded in the edges of the tire, and it hooks onto the rim to hold the tire in place. The inner tube is a separate inflatable tube that is inserted inside the tire and holds the air pressure.

The global market for clincher bike tires is a significant segment within the broader bicycle tire industry. With the popularity of cycling as a sport, fitness activity, and means of transportation, there is a demand for various types of bike tires, including clincher

tires.

The global clincher bike tires market is influenced by factors such as the growth of the cycling industry, advancements in tire technology, changing consumer preferences, and regional cycling trends.
