The global Cling Wrap for Kitchen market size is predicted to grow from US\$ 1129 million in 2025 to US\$ 1470 million in 2032; it is expected to grow at a CAGR of 3.8% from 2026 to 2032.

Cling wrap for kitchen refers to food contact film packaging materials used for household kitchen food storage, plate covering, leftover food preservation, fruit and vegetable wrapping, refrigeration and freezing, and short-term anti cross flavor. Common materials include PE, PVC, PVDC, etc. Among them, PE cling film has a relatively high proportion in household kitchen scenes due to its safety, flexibility, and versatility, PVC cling film also has certain applications due to its good adhesion and transparency, PVDC and high barrier film are mostly used for food with higher preservation requirements, and biodegradable cling film is mainly aimed at environmental protection consumption needs. In 2025, global cling wrap for kitchen production reached approximately 1,217 K MT, with an average global market price of around US\$ 2,964 per MT.

Cling wrap for kitchen is a household commodity with high frequency, low unit price, and strong channel attributes. The overall demand is stable, and the growth mainly comes from the continuation of household food storage habits, the increase in household cooking frequency, the increase in consumption of refrigerated and frozen foods, the convenience of online daily necessities procurement, and the increase in consumer demand for food hygiene and odor prevention. Compared to commercial food cling film, kitchen cling film places more emphasis on convenience of use, ease of tearing, adhesion, safety, no odor, transparency, and microwave or freezing adaptability. Brand companies typically increase product premiums through boxed cutters, easy to tear structures, high temperature or freezing resistance, biodegradable materials, and food

contact safety certifications. In terms of material trends, the share of PE cling film in household scenarios continues to increase, while PVC products will be affected by plasticizer safety awareness and environmental pressure. High barrier and biodegradable products have growth potential but are limited by cost. In the future, the focus of competition will be on food grade safety, non plasticizing, easy to tear packaging design, anti fog and anti cross flavor, lightweight, biodegradable materials, and channel coverage capabilities. Price competition for low-end universal products will still be evident, and enterprises with brand influence, stable film formula, automated slitting and packaging capabilities, and online and offline channel resources are more likely to maintain stable sales and higher gross profit margins.
