Clinical communication and collaboration (CC&C) systems coordinate activities and data flow between clinicians, nurses, physicians, and other medical professionals. CC&C software securely integrates with clinical systems like EHRs (supplementing existing patient data with additional documents, images, and messaging), medical staff scheduling software (providing visibility about the availability of on-campus and on-call staff), and healthcare IT systems (enhancing workflow and improving care transitions). Hospitals, ancillary care providers, and clinical laboratories can leverage CC&C solutions to reduce referral leakage and rate of readmissions, and ensure interoperability between systems. With a CC&C platform deployed, health care organizations and practices can maintain patient context, facilitate real-time collaboration, reduce inefficiency and gaps, achieve patient safety and satisfaction, and preserve profitability.
