The global Clinical Hemostatic Material market size is predicted to grow from US\$ 636 million in 2025 to US\$ 1101 million in 2032; it is expected to grow at a CAGR of 8.3% from 2026 to 2032.

Hemostatic materials can be used to stop bleeding, and the process is realized following various ways. For example, gauze, a traditional hemostatic material, can be used to stop bleeding under conditions of physical compression (realized using pressure wraps). Hemostatic sponges function as efficient absorbents.

According to our research, the global market for medical devices is estimated at US\$ 603 billion in the year 2023, and will be growing at a CAGR of 5% during next six years. The global healthcare spending contributes to occupy 10% of the global GDP and is continuously rising in recent years due to the increasing health needs of the aging population, the growing prevalence of chronic and infectious diseases and the expansion of emerging markets. The medical devices market plays a significant role in the healthcare industry. The market is driven by several factors, including the increasing demand for advanced healthcare services globally, advancements in medical technology, growing geriatric population, rising healthcare expenditure, and increasing awareness about early disease diagnosis and treatment.
