Many players in market are offering different types of clinical nutrition products such as Infant nutrition, enteral nutrition, and parenteral nutrition. Various factors such as high birth rate, improved healthcare facilities, increasing disposable income, rising awareness about clinical nutrition products in emerging economies may fuel the growth of the global clinical nutrition market.

Major factors driving the global clinical nutrition market are growing rate of sufferers of receiving malnutrition treatment, rising population of baby boomers, high rate of birth & increasing number of premature births, and growing incidences of lifestyle related diseases. However, stringent rules and lack of awareness about clinical nutrition may hamper the market growth.
