The global CLIP 3D Printers market size is predicted to grow from US\$ million in 2025 to US\$ million in 2031; it is expected to grow at a CAGR of %from 2025 to 2031.

In CLIP, liquid photopolymer resin is selectively exposed to a UV light source and is solidified into parts. Despite initial appearances, CLIP is unique from SLA and DLP as it is a truly continuous process that “grows” parts, removing the discrete steps of previous printing methods. CLIP’s innovation lies in its oxygen-permeable membrane that creates a dead zone underneath the part (known as a persistent liquid interface), allowing for continuous curing as the part is drawn out of the resin. Instead of using a layer-by-layer approach, CLIP uses a digital projector and various microcontrollers to project an ever-changing picture of a 3D model, streamlining the print into a layer-less design.

The industrial printer segment leads the market, accounting for more than 76.0% of the global revenue share in 2022. Based on printer type, the industry is further segmented into industrial printers and desktop 3D printers. The huge share of industrial 3D printers can be attributed to the widespread adoption of industrial printers in heavy industries such as automotive, electronics, aerospace and defense, and healthcare. Prototyping, design and tooling are the most common industrial applications in these verticals. 3D printing benefits manufacturers in terms of prototyping, structural and final product design, modeling and time to market. As a result, production costs are greatly reduced and manufacturers are able to offer better products at reasonable prices. Owing to these advantages, the demand for 3D printers is expected to further increase in the coming years. Widespread adoption of 3D printing in prototyping, design, and mold making is driving growing demand in the industrial sector. Hence, the industrial printer segment is expected to continue to dominate during the forecast period. The adoption of

desktop 3D printers was initially limited to hobbyists and small businesses. Today, however, they are increasingly used for home and household purposes. The education sector including schools, educational institutions, and universities are also deploying desktop printers for technical training and research purposes. Small businesses in particular are adopting desktop printers and diversifying their operations to provide 3D printing and other related services. For example, the concept of 'fabshops' is gaining popularity in the United States. These fabshops provide on-demand 3D printing of parts based on designs and requirements provided by customers. Hence, the demand for desktop printers is expected to witness substantial growth over the forecast period.
