A plate heat exchanger gasket is a sealing component used in heat exchangers to prevent the leakage of fluids between the different components of the heat exchanger. Heat exchangers are devices designed for the efficient transfer of heat from one fluid to another. They are commonly used in various industrial processes, HVAC (Heating, Ventilation, and Air Conditioning) systems, and other applications where heat transfer is essential. The most commonly used materials include: NBR, HNBR, EPDM, FKM (various grades), etc. There are two basic ideas of installing of the seals: glue style gasket and clip style seals. Clip style gaskets are installed without any adhesive. This improvement lets fitting of the gasket on the plate just by installing clips into grooves on the plate. Hence gasket is high resistance against pressure and enable for a quick and simple replacement. This report focuses on the market statistics for clip style gasket for plate heat exchangers.
