A clipless MTB shoe is a type of footwear specifically designed for mountain biking that utilizes a pedal and cleat system for increased efficiency and control. Unlike traditional platform pedals where the rider's foot rests on the pedal surface, clipless pedals require special shoes with cleats attached to the sole. These cleats then securely clip into corresponding mechanisms on the pedals. Clipless MTB shoes are engineered to provide a stable platform for the foot while allowing for efficient power transfer from the rider to the bike. They typically feature stiff soles to enhance energy transfer, as well as aggressive tread patterns for traction when walking or hiking off the bike.
