The clock-type sprinkler is a piece of equipment used for agricultural irrigation. It can automatically perform sprinkler irrigation operations at a scheduled time. This kind of sprinkler is usually controlled by a clock device, which can set the start time, duration and interval of irrigation. Once the time is set, the sprinkler will automatically perform irrigation operations according to the set schedule without manual intervention. Clock-type sprinkler irrigation machines are usually used in large farmland or orchards, which can help farmers save time and labor costs and improve irrigation efficiency. They can perform automated irrigation according to the water needs of plants and soil moisture conditions, thereby ensuring that plants receive the appropriate amount of water and improving crop yield and quality. This equipment has been widely used in modern agricultural production.
