Clodinafop-propargyl is a systemic herbicide of the aryloxyphenoxypropionate class, developed by Syngenta, and is mainly used to control grass weeds (such as sedge and hard grass) in cereal fields (such as wheat and barley). Its mechanism of action is to inhibit plant acetyl-CoA carboxylase (ACCase), block fatty acid synthesis, and cause weed death. Clodinafop-propargyl belongs to the class of fluorinated aryloxyphenoxypropionates, which not only has optical activity, but also shows excellent adaptability in low temperature environments. In addition, clodinafop-propargyl is often used in combination with safeners to further enhance its safety and effectiveness.
