The global Close-Up Zoom Lens market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

The close-range zoom lens is an optical lens that can change the focal length while keeping the distance between the lens and the object constant, so as to achieve close-range zoom. A close-range zoom lens is usually composed of multiple groups of lenses, and the focal length can be changed by adjusting the relative positions of the lenses. The advantage of a close-range zoom lens is that it can zoom in a close range, so that it can capture more detailed images. In addition, the close-range zoom lens can also achieve the effect of shallow depth of field, making the subject stand out more. Close-range zoom lenses are widely used in photography, film production, surveillance and other fields. For example, when shooting a portrait of a person, a close-up zoom lens can be used to zoom from close-up to full body, making the picture more vivid. In film production, close-range zoom lenses can achieve effects such as lens tracking and depth-of-field adjustment. In the monitoring field, the close-range zoom lens can focus and zoom on a specific area, improving monitoring effect and safety.
