Closed Automated Cell Processing System is an automated cell processing system used in the fields of cell therapy and biopharmaceuticals. This system is primarily used to process and produce live cell products for clinical treatment or laboratory research. Due to the integration of multiple devices into the same device, Closed Automated Cell Processing Systems are often small in size, which can reduce the floor space while ensuring low contamination risks. This can more effectively utilize the area of the clean room and also save money on the side. cost.

This kind of equipment does not integrate multiple steps into one step, so different steps can be managed in a modular manner, and the modules can be modified at any time according to production needs, so that the workflow and platform selection that best suits their products can be customized according to customer needs.

The global Closed Automated Cell Processing System market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of %from 2024 to 2030.
