The global Closed-cell Extruded Polystyrene Foam market size is predicted to grow from US\$ million in 2025 to US\$ million in 2031; it is expected to grow at a CAGR of %from 2025 to 2031.

The impact of the latest U.S. tariff measures and the corresponding policy responses from countries worldwide on market competitiveness, regional economic performance, and supply chain configurations will be comprehensively evaluated in this report.

Extruded polystyrene foam (XPS) consists of closed cells, offers improved surface roughness and higher stiffness and reduced thermal conductivity. The density range is about 28-45 kg/m³.

Extruded polystyrene material is also used in crafts and model building, in particular architectural models. Because of the extrusion manufacturing process, XPS does not require facers to maintain its thermal or physical property performance. Thus, it makes a more uniform substitute for corrugated cardboard.

APAC has emerged as the leading consumer and producer of XPS owing to the increasing demand from the domestic front and rising income levels. The easy availability of low-cost labor and economical & accessible raw materials are increasing the production of XPS in the region, thereby driving foreign investments. APAC is also the fastest-growing XPS market. The government proposals to improve public infrastructure and rising cash-intensive non-residential construction are positively impacting the market growth. The demand in APAC will further increase in the next five years because of several on-going and upcoming building & construction projects in the developing countries.
