Closed-circuit water systems, also known as closed-loop water systems, are ways of heating or cooling water for industrial or commercial processes. As referred to in the term 'closed circuit water supply system', this system keeps the same water in the system for a long time. Water used as a primary medium and supplied to commercial, manufacturing and industrial process activities is sometimes affected by corrosion, microorganisms, biological scaling, deposition, etc. It is necessary to maintain appropriate water conditions at all times to ensure that closed-circuit systems operate with optimal efficiency. This can be achieved by using carefully selected closed-circuit water treatment chemicals. If appropriate conditions are not maintained in a closed system, the system may begin to leak.
