Closed Loop Wet Air Cooler is a cooling device that combines the wet cooling principle with a closed circulation system. It is widely used in industrial cooling, air conditioning systems, power stations, and various places that require efficient cooling. It reduces the heat generated by equipment or processes by utilizing the heat exchange between water and air. Unlike traditional open cooling towers, the cooling water of a closed loop wet air cooler is kept in a closed system and does not directly contact the external environment, thereby reducing water consumption and improving cooling efficiency.
