A Closed Diving Rebreather, also known as a Closed-Circuit Rebreather (CCR), is an advanced type of underwater breathing apparatus that recycles the diver's exhaled gas by removing carbon dioxide and replenishing it with a precise amount of oxygen, enabling longer and deeper dives with minimal gas consumption. Unlike open-circuit systems that release exhaled gas into the water, CCRs maintain a closed loop, making them highly efficient and suitable for technical, scientific, and military diving.

The global Closed Diving Rebreather market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
