Clogs are a popular piece of footwear in the nursing community. Clogs provide nurses with better support which helps them minimize foot, ankle, knee and back pain, which is extremely important as nurses can spend long hours on their feet with little chance for rest.

Clogs have been made very popular due to the efforts of major companies operating in the open heel nursing clogs market. They are very common since they are spacious, comfortable, provide pain relief via targeting pressure points, and they promote good gait and posture. They are also advised for those bunions who are experiencing some deformity, or those who have worn poorly fitted footwear for several years. Nursing clogs have always been popular throughout history and it is expected that they continue to remain so for the foreseeable future.
