The global Closed Loop Artificial Pancreas System market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Artificial pancreas refers to the use of electronic machinery to replace the endocrine function of the pancreas. Since islets are the endocrine part of the pancreas, the correct name for this artificial organ should be artificial islets. However, the traditional name ?artificial pancreas? is still commonly used internationally. The artificial pancreas closed-loop system is an automatic insulin delivery device (AID) that can automatically infuse basal insulin to make our nighttime blood sugar more stable. Although insulin needs to be infused manually during meals, its operation interface will provide intelligent Mealtime insulin dosing recommendations. The system consists of three elements, including a dynamic blood glucose monitoring system, an insulin pump and a central algorithm control system, so that the system can determine the insulin infusion dose based on real-time dynamic blood glucose monitoring results.

United States market for Closed Loop Artificial Pancreas System is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
