## Abstracts

The global Closed Loop Vector Inverter market size is predicted to grow from US\$ 556 million in 2025 to US\$ 818 million in 2031; it is expected to grow at a CAGR of 6.6% from 2025 to 2031.

The impact of the latest U.S. tariff measures and the corresponding policy responses from countries worldwide on market competitiveness, regional economic performance, and supply chain configurations will be comprehensively evaluated in this report.

A closed-loop vector inverter is a high-performance inverter that uses vector control technology and introduces speed or rotor position feedback (such as an encoder). It can detect the motor's operating status in real time, compare the feedback signal with the target value, and adjust the current vector to achieve precise control of the motor's torque and speed. Compared with an open-loop vector inverter, a closed-loop system has higher dynamic response performance, zero-speed torque output capability, and stronger anti-interference ability.

United States market for Closed Loop Vector Inverter is estimated to increase from US\$ million in 2024 to US\$ million by 2031, at a CAGR of % from 2025 through 2031.

China market for Closed Loop Vector Inverter is estimated to increase from US\$ million in 2024 to US\$ million by 2031, at a CAGR of % from 2025 through 2031.
