The report requires updating with new data and is sent in 48 hours after order is placed.

Closed tracheal suction system (CTSS) permits the health care providers to perform suctioning several times without disconnection from ventilator, thus, it decreases hypoxemia and infection rate.

In CTSS, the catheter is part of the ventilator circuit which is a sterile, closed, in line suction catheter to the ventilator circuit allowing passage of suction catheter through the artificial airway without disconnecting the patient from the ventilator during suctioning. It is introduced into the airways through a one way valve. This system can stay for as long as 24 hours or as per the manufacturer's instructions. This type of suction system has comparatively fewer physiological disturbances and provides ease of use given that only operator is required for suctioning.

The Closed Tracheal Suction System industry can be broken down into several segments, Size Fr/Ch: 10, Size Fr/Ch: 12, Size Fr/Ch: 14, Size Fr/Ch: 16, Others, etc.
