The global Clostripain market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Clostripain is a proteolytic enzyme derived from the bacterium *Clostridium histolyticum*. It is a cysteine endopeptidase that specifically cleaves peptide bonds at the C-terminal side of arginine residues. Clostripain has broad substrate specificity and is commonly used in protein research for enzymatic digestion and protein sequencing applications. It is particularly useful for generating peptide fragments for mass spectrometry analysis and protein structure elucidation. Clostripain's high specificity and efficiency make it a valuable tool in the field of proteomics and protease research.
