Clothianidin is a neonicotinoid insecticide whose main active ingredient is Thiamethoxam. It interferes with the normal function of the central nervous system of pests, causing them to stop feeding and eventually die. Due to its broad-spectrum, high-efficiency and long-lasting insecticidal effect, clothianidin is widely used to control a variety of pests in agriculture, such as aphids, whiteflies, leafhoppers, etc., and is relatively low in toxicity to non-target organisms. The insecticide is commonly used to protect a variety of crops, including cereals, vegetables, fruits and cotton, and helps to improve the yield and quality of crops.

The global Clothianidin Insecticide market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
