Abstracts

The global Cloud Automated Machine Learning market size is predicted to grow from US\$ 6184 million in 2025 to US\$ 20526 million in 2032; it is expected to grow at a CAGR of 18.9% from 2026 to 2032.

Cloud automated machine learning platforms are cloud-based software solutions that automate key stages of the machine learning lifecycle, including data preprocessing, feature engineering, model selection, hyperparameter tuning, validation, and deployment, enabling organizations to build and operationalize ML models with minimal manual intervention. These platforms are widely used across enterprise analytics, customer intelligence, finance, healthcare, retail, manufacturing, and IoT applications. From a value chain perspective, upstream activities include cloud infrastructure, data storage, ML frameworks, and compute resources, midstream processes focus on AutoML algorithm development, platform software engineering, orchestration, and MLOps integration, while downstream demand is driven by enterprises, data teams, application developers, and business users seeking scalable, cost-efficient ML adoption. The industry maintains a gross margin of 65%–85%, supported by cloud scalability, subscription-based revenue models, strong platform lock-in, and recurring enterprise usage.

Industry analysis indicates that cloud AutoML platforms are shifting machine learning adoption from expert-driven development toward democratized, enterprise-wide usage. Growth is driven by increasing data volumes, demand for faster model iteration, tighter integration with cloud data ecosystems, and rising emphasis on operationalized ML rather than experimental modeling.
