The global Cloud-Based Radiology PACS System market size is predicted to grow from US$ million in 2025 to US$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

A cloud-based PACS is a Picture Archiving and Communication System running on remote cloud computing services. In this system, third-party healthcare IT professionals are responsible for the system’s deployment, support, upgrades, system maintenance, and updates, allowing physicians to focus solely on patient care rather than worrying about IT issues.

Cloud PACS consolidates multiple imaging systems with one flexible, customizable, and low-maintenance platform. Cloud PACS systems are highly scalable, catering to rapidly growing health systems or imaging practices. Designed to be highly flexible, cloud PACS systems enable healthcare providers to view medical images on more devices, including mobile devices. Modern healthcare facilities are making the shift to cloud-based PACS to improve security and scalability and to reduce the burden on IT staff to maintain the imaging system.

United States market for Cloud-Based Radiology PACS System is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
