Abstracts

The global Cloud Computing Data Center IT Asset Disposition (ITAD) market size is predicted to grow from US\$ 6853 million in 2025 to US\$ 15012 million in 2032; it is expected to grow at a CAGR of 11.8% from 2026 to 2032.

Cloud Data Center IT Asset Disposal (ITAD) is a comprehensive, professional disposal service system designed for public, private, and hybrid cloud providers, as well as large internet cloud service providers. It addresses the large-scale, centralized decommissioning of hardware assets such as servers, storage systems, networking equipment, and IDC infrastructure. With absolute data security as the baseline, the service balances maximizing residual value recovery, environmentally compliant disposal, and end-to-end traceability to support cloud providers' rapid equipment upgrades, data center expansion and relocation, computing architecture upgrades, as well as ESG and regulatory compliance requirements.

Development Trends

Large-scale, Batch-based, and Standardized Disposal: A single batch of decommissioned equipment from cloud providers can reach tens of thousands of units, driving ITAD toward automated assembly lines, unified acceptance standards, and centralized processing centers.

Extremely Stringent Data Security Requirements: In multi-tenant environments with massive user data, media destruction primarily relies on physical shredding and integrated destruction methods, while software erasure is reserved for non-core devices; end-to-end evidence retention and blockchain-based traceability have become

standard features.

Accelerated Device Iteration and Significantly Shorter Retirement Cycles

Cloud computing, AI training, and intelligent computing centers are driving rapid hardware iteration cycles of 3-4 years, fueling sustained high growth in ITAD demand.

Circular Economy and Second-Hand Reuse Become Mainstream

Functioning equipment is refurbished for use in edge cloud, SME cloud, and secondary computing markets; component-level disassembly and reuse enhance residual value.

Green, low-carbon initiatives and ESG drive the safe disposal of electronic waste, precious metal recovery, and carbon emissions accounting—all of which are now incorporated into cloud service provider evaluations, making green ITAD a critical requirement.

Liquid-cooled and high-density equipment create new disposal challenges, with coolant recovery, disassembly of sealed components, and leak-proofing becoming essential capabilities for professional ITAD providers.
