Cloud infrastructure entitlement management (CIEM) software, also sometimes referred to as cloud permissions management software, is a security solution that manages user privileges or 'entitlements' in cloud environments. The software controls access to applications, infrastructure, and resources in the cloud environment using the principle of least privileges (POLP). The least privilege policy is an integral part of the zero trust policy that limits the attack surface of security threats by restricting access in the cloud landscape. CIEM software manages user accounts, defines user roles, and provides access control to ensure only the right users have access to resources, which reduces unauthorized access. Companies with complex cloud landscapes, as well as numerous teams and users, can use CIEM software to secure their cloud environments and ensure compliance. Security and IT operations teams use this tool to control access privileges and monitor the cloud environment for unauthorized access.
