Cloud mining platform is a service that allows users to remotely mine cryptocurrencies without having to buy, set up, or maintain their own mining hardware. In traditional cryptocurrency mining, individuals or companies invest in hardware, such as ASIC miners or GPUs, to solve complex mathematical problems and validate transactions on a blockchain network in exchange for rewards in the form of newly minted coins or transaction fees. Cloud mining platforms, however, operate by renting out mining hardware and infrastructure to users who then pay for hashing power or mining contracts. Users typically purchase a certain amount of hashing power for a specific duration, and the cloud mining platform takes care of the hardware setup, maintenance, and electricity costs.

The global Cloud Mining Platform market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
