Abstracts

The global Cloud-native Application Protection Platform market size is predicted to grow from US$ 10590 million in 2025 to US$ 37840 million in 2032; it is expected to grow at a CAGR of 20.3% from 2026 to 2032.

Large enterprises are early adopters of CNAPP and the associated professional services. Large enterprises have increasingly started using cloud-based systems over traditional on-premises solutions. These enterprises have several departments performing different operations, which makes it difficult for the organization to handle the security posture of the whole organization. Additionally, large enterprises are at greater risk with the onset of the pandemic and the adoption of the Work from Home (WFH) trend. Large enterprises deploy cloud-based solutions due to high flexibility, scalability, and low maintenance costs. As businesses store information and data in the cloud, the requirement for security solutions is also increasing. The increasing cyber threats reported by large organizations are expected to drive the deployment of CNAPP solutions and services among large enterprises. For instance, in the CNAPP market, CrowdStrike provides CrowdStrike Cloud Security. It allows breach prevention, workload protection, and cloud security posture management. It helps gain unified visibility across the entire cloud, monitor and address misconfigurations, advance identity security, and enforce security policies and compliance to stop cloud breaches. It allows automated discovery, continuous runtime protection, EDR for cloud workloads and containers, and managed threat hunting.
