Cloud PBX and VoIP phone systems are both important components of modern communications technology. Cloud PBX is a communication system based on cloud computing technology. It uses cloud servers and the Internet as communication infrastructure to provide telephone communication and other communication functions. Compared with traditional PBX systems, cloud PBX migrates the hardware equipment and software functions of the entire communication system to the cloud. Users no longer need to purchase, install and maintain expensive hardware equipment. Instead, they subscribe to cloud services provided by cloud PBX service providers and use virtualization technology on the cloud platform to implement communication functions. VoIP phone system refers to a phone system that uses Internet Protocol (IP) to transmit voice and multimedia communications.
