Product Data Management (PDM) tools help engineering teams organize product design files and maintain consistency across versions while they develop and update products, ensuring there exists a single version of each file and that each product update change is tracked. PDM systems provide a single source of truth, robust version control and a collaborative platform. Engineers can focus on developing products rather than worrying about working from wrong file versions or missing an important update. Product design files provide useful information for various teams associated with the whole product lifecycle.
