**Growing demand for zero-trust security:** As cyberattacks become more sophisticated and frequent, organizations will need to adopt a zero-trust security approach that assumes no trust for any user or device accessing the cloud resources. This will require cloud identity and access management solutions that can implement granular and dynamic policies based on contextual factors such as user behavior, device posture, location, time, risk level, etc.

**Rising use of artificial intelligence and machine learning:** As the volume and complexity of cloud data and resources increase, organizations will need to leverage artificial intelligence and machine learning to automate and enhance their cloud identity and access management processes. This will include using AI/ML for identity verification, anomaly detection, threat prevention, policy optimization, user experience improvement, etc.

**Expanding role of blockchain technology:** As organizations seek to improve the transparency and trustworthiness of their cloud transactions and interactions with external parties, they will need to explore the potential of blockchain technology for their cloud identity and access management needs. This will include using blockchain for
