The report requires updating with new data and is sent in 48 hours after order is placed.

Cloud security is the protection of data, applications, and infrastructures involved in cloud computing. One of the biggest current applications of the cloud in healthcare is data storage. The healthcare industry works with a tremendous amount of data, and even the most sophisticated hardware installations can't handle it all. Cloud networks allow healthcare professionals to store all the data they use off-site to avoid the cost and strain of maintaining physical servers. While the need for healthcare is 24/7, certain periods like the cold and flu season require more of the healthcare provider's attention. The cloud can scale to increase or decrease data storage and traffic depending on the client's needs. Thus, healthcare providers are able to fit their network requirements to match their service demands.
