Cloud WAF is a web application protection service based on cloud computing technology, designed to protect users' web applications from a variety of network threats and attacks. Cloud WAF does not require users to install hardware or software locally and provides security protection functions through cloud services. The main functions of cloud WAF include real-time traffic monitoring, automatic protection rule updates, elastic scaling, multi-region deployment, and policy configuration and management. Cloud WAF has significant advantages over traditional locally deployed WAF. First of all, it is based on cloud services. Enterprises do not need to purchase and maintain expensive hardware equipment, which reduces costs. Especially for small and medium-sized enterprises, they can easily obtain the same level of security protection as large enterprises. Secondly, cloud WAF is more resilient when dealing with large-scale attacks and can quickly disperse traffic through globally distributed servers to ensure high availability and stability of the website.
