The global CMAB009 market size is predicted to grow from US\$ 90.98 million in 2025 to US\$ 245 million in 2032; it is expected to grow at a CAGR of 7.8% from 2026 to 2032.

CMAB009 is a recombinant chimeric anti-epidermal growth factor receptor monoclonal antibody and classified as a biosimilar of Cetuximab. It specifically binds to the EGFR target on the surface of tumor cells, blocks receptor-mediated signaling pathways, inhibits the proliferation, invasion and metastasis of tumor cells, and induces tumor cell apoptosis. With stable efficacy and favorable safety profiles, CMAB009 is clinically applied for the treatment of a variety of solid malignant tumors. It effectively meets the medical demands in the field of targeted therapy and provides high-quality and more accessible biopharmaceutical treatment options for tumor patients. In 2025, global CMAB009 production reached approximately 3.26 Million Vials.

CMAB009 is an important targeted anti-tumor biological agent in the domestic medical market, serving as a high-quality biosimilar of cetuximab. With the continuous expansion of clinical application scenarios for solid tumor treatment and the rising demand for affordable targeted drugs, this product enjoys broad market development prospects. Benefiting from policy support for innovative biological medicines and the accelerated process of import substitution, the drug is gradually increasing its penetration in hospital terminals and oncology treatment fields. Meanwhile, it faces competition from other EGFR targeted preparations and similar biosimilar products in the industry. Through continuous clinical promotion and optimized commercial layout, CMAB009 will further enhance its market competitiveness and expand its application scope in global anti-tumor treatment.
